

Fuel Technologies - Feedstocks

The feedstock for Balcones Resources Fuel Technologies comes from a variety of sources – most of them a bit unconventional. Balcones Resources works to evaluate our clients' total waste stream, taking materials that other waste companies haul to their landfill and instead finding economically viable ways to recycle them.

Our fuel technologies are one important way we transform would-be landfill fodder into a valuable resource.

Feedstock for our alternative fuels includes:

- Paper waste
- Wood
- Plastic
- Destroyed Products
- Agricultural Waste
- Carpet Scrap

But we're not done yet! **Contact us today to see if your waste stream can be converted into eco-friendly fuel.** We routinely test new materials and we're always looking for better solutions.
